*Merged 4 production-ready pull requests **improving open-source web projects***

October 2025

- Reviewed and improved code quality across open-source repositories using Git workflows
- Reviewed code for correctness, edge-case handling, and maintainability — applied systematic debugging methodology on unfamiliar codebases

TECHNICAL PROJECTS

NeuroNest | [Demo](#) | [GitHub](#) | React, Node, Express, MongoDB, JWT

Sept 2025

- Designed RESTful API architecture with stateless communication, managing concurrent session handling and low-latency response patterns demonstrating understanding of system level performance constraints
- Built modular backend services in Node.js/Express optimised for scalability; applied separation of concerns principles analogous to compiler frontend/backend decomposition
- Implemented JWT authentication with bcrypt applied cryptographic hashing and secure data-flow design across client-server boundary

Event Ease | [Demo](#) | [GitHub](#) | HTML, CSS, JavaScript

May 2024

- Built the frontend of EventEase, an event management platform, using HTML, CSS, and JavaScript with a focus on responsive and user-friendly design.
- Implemented features for event scheduling, participant registration, and interactive dashboards.
- Designed modular components to enable smooth future integration with backend services.
